Qiskit Functions catalog

Explore the most advanced ecosystem of circuit and application services designed to accelerate algorithm discovery, streamline application development, and improve execution performance.

[Browse the catalog](#)

Qunova Computing Solve approximate molecular ground states using an iterative subspace diagonalization, with computational efficiency and accuracy.	Optimization Solver Q-CTRL Solve optimization problems at full device size (156Q) from high-level inputs, automatically & efficiently achieving high-accuracy results at utility-scale.	with automated, AI-driven error suppression.
Singularity Machine Learning Multiverse Computing Solve real-world classification problems on quantum hardware without requiring quantum expertise.	Quick-PDE ColibriTD Solve partial differential equations and	QESEM: error suppression & mitigation Qedma Accurate results for large circuit volumes using characterization, transpilation, error suppression and unbiased mitigation.
		Iskay Quantum Optimizer Kipu Quantum

Choose an access plan

For getting started

Open Plan

Access quantum computers for up to 10 minutes of runtime per month. Active users may be eligible to request additional time.

Free

[Sign up](#)

[View features](#)

For small-scale work

Pay-As-You-Go Plan

Pay for the quantum computer access you use. Billed per second of usage.

Starts at \$96 USD / minute

[Sign up](#)

[View features](#)

For project-based work

Flex Plan

Pre-purchase time for projects that require execution flexibility or bursts of sustained usage, starting at 400 minutes per year.

Starts at \$72 USD / minute

[Contact us](#)

[View features](#)

Premium Plan

Annual subscription for large-scale quantum compute capacity, starting at 5200 minutes per year.

Starts at \$48 USD / minute

For unparalleled access

On-Prem Plan

Access to a dedicated on-prem quantum system that is serviced and maintained by IBM Quantum.

A new quantum-centric supercomputing workflow for biochemistry.

Facilitate classroom access

Professors can request a Classroom Account to manage and facilitate access for their students. With Classroom Accounts, students can use Open Plan resources without needing to provide personal credit card information.

Accelerate your quantum journey

Get additional access for research

IBM is committed to supporting researchers advancing the field of quantum computing. Some projects needing additional resources may be eligible for additional compute time via the IBM Quantum Credits program.

Explore business value

From helping you launch a quantum initiative at your organization to empowering you to develop utility-scale applications, IBM has a variety of programs to support you in your quantum journey. Contact us to learn how IBM can help you prepare to capture business advantage with quantum.
